

Day in the Life Project Instructions

For the final project in this course, students will evaluate the facets and intersectionality of being diagnosed with a chronic illness. Each group will be assigned a health condition (e.g., epilepsy, multiple sclerosis, lupus, etc.). Students will research this condition and how it impacts all areas of a person's life. These life sectors must include view of self, diet, physical impact/ accessibility, financial burden, career options, and social life. If a health condition impacts a life sector not listed, it may be included as an addition/ alternative, but **ONLY** with instructor approval. Next, the group will think critically on the intersectionality of the impacted life sectors and address the unique added difficulties for **two** of these intersections. Groups will present these projects to the class during the final exam. Each presentation should take approximately 10 minutes, with each group member presenting equal portions. After the presentations, each member of the group will conduct a group evaluation and personal reflection.

To be successful in this project, students should apply the information they have learned throughout the course. For example, consider how healthcare access, insurance options, health provider communication, self-efficacy, treatment adherence, and health behaviors could create a spectrum of possibilities for each life sector. Exemplary projects will illustrate a strong

understanding of the illness and its impacts, exhibit critical thinking about the intersectionality of the illness, and communicate the challenges of the illness with clarity and compassion.

Deadlines

The completed PowerPoint MUST be emailed to Dr. Scheuler **by Sunday, May 3rd at 11:59 p.m.**, so I can screen PowerPoints for any potential concerns. *Note:* If you have an item in your PowerPoint that you are concerned about (due to subject sensitivity, phrasing, or any other potential issue), discuss the concern with Dr. Scheuler as soon as it arises. Failure to implement changes from the screening will result in a 5-point deduction.

The PowerPoint must be submitted to Canvas by one group member **by Wednesday, May 6th at 1p.m.**, though early submission is encouraged, to avoid technical difficulties. The presentations of the PowerPoints will be conducted during the final exam window (December 17th, from 1 pm to 3 pm). After all presentations are completed, each student will fill out a group evaluation. Finally, each student will conduct a short introspective reflection on their learning experience throughout the project. The points for each section will be doubled (as the project is worth 200 points) and the grades will be posted to Canvas.

Section Breakdown

Background on Illness – 10 points

Provide a thorough description of the illness, so anyone unfamiliar with the health condition can understand how the different life sectors could be impacted. See guiding questions for ways to approach this section below. Note: the following guiding questions (and all future guiding questions) are not an extensive list of possible considerations to include in this section, as the pertinent information may vary between health conditions.

- Operationally define the illness
- What body systems are involved in this illness?
- How does the illness typically present? How does it develop if untreated?
- Is the illness restricted to certain populations?
- What are risk factors for developing this illness (genetics, exposure, etc.)?
- What are protective factors that can help prevent or limit disease development?
- How is the illness diagnosed?
- Is there a severity assessment for the illness?

Exemplary – 10 pts	Proficient – 8 pts	Developing – 6 pts	Needs Improvement – 4 pts or below
Provides a clear and accurate definition of the illness, explains the involved body systems, describes presentation and progression, identifies risk & protective factors, explains diagnosis/severity, and demonstrates strong comprehension	Addresses most guiding questions with accurate information, though some explanation lacks depth of clarity	Includes basic facts but misses multiple guiding questions or provides surface level information	Information is incomplete, inaccurate, or not aligned with guiding questions

Treatment/ Management – 6 points

Explain how the health condition is treated or managed. Provide a thorough overview, so the audience can understand the daily life of a person receiving treatments, and/or managing life after diagnosis. Consider the topics we have discussed throughout the course, as approaches to treatment can be complex and varied. See guiding questions below.

- Is this disease “curable”?
- What are the most common treatments?
- What are the side effects of the treatments/ management medications?
- Are treatments designed to target the disease or the symptoms?
- How much do treatments improve quality of life?

Exemplary – 6 pts	Proficient – 5 pts	Developing – 4 pts	Needs Improvement – 3 pts or below
Clearly explains curability/ outcomes, treatments and their targets, and impact to quality-of-life with sufficient detail.	Addresses all required elements, but with limited depth or less precise explanation of treatment impact.	Provides a general overview of treatment, but omits important elements (targets, curability, QoL impact, etc.)	Information is incomplete, inaccurate, or lacks meaningful application

View of Self – 5 points

Describe how being diagnosed with this health condition could impact how a person views themselves. Pay particular attention to topics discussed in our course, such as self-efficacy and body image. Base your statements on actual descriptions of illness experience, not your expectations. Consider the following guiding questions.

- Find support pages/ blogs/ media posts. How do people that have been diagnosed with this illness describe their life? How do they describe feeling about being someone with this diagnosis?
- Do people discuss feeling uncomfortable wearing certain clothing, going certain places, or trying new things?
- How may a person's sense of self-efficacy and sense of self be impacted by the illness? By the treatments?

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Diet – 5 points

How could a person's diet shift as a result of this health condition? Note: It is possible (and likely) that the impact to diet is through required medication, rather than the illness itself. Additionally, there may be recommended dietary changes (e.g., food that is less likely to cause inflammation). If there is no impact to diet, explain why a person's diet will not shift at all. Consider the following guiding questions.

- Does this disease impact a person's diet?
- If so, how easy is it to accommodate these restrictions when grocery shopping?
- Look up a few popular restaurants. What proportion of the menu options would be available to a person with these dietary restrictions?

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Physical Ability/ Accessibility – 5 points

Does this illness impact physical ability/ accessibility? Be aware, the impact can require long-term changes or may only require adjustments during flareups. Additionally, even if an individual may be able to still perform an activity, there may be limitations on how long they can do the activity without straining their body. Consider the guiding questions provided below. If this sector is not impacted, explain why not.

- Does this illness impact a person's ability to comfortably walk, lift heavy objects, balance, or perform daily activities?
- Are there limitations to how long a person can perform a physical task (e.g., can walk across a room, but a walk in the park would be uncomfortable/ unfeasible)?
- What daily tasks may be impacted by these limitations? (Grocery shopping, driving, playing with kids, going to school, having in-depth conversations, etc.)

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Financial Burden – 5 points

Explain (to the best of your ability to access) the financial burden for a person diagnosed with this health condition. To address this section, students will need to be diligent and resourceful. Consider the guiding questions provided below.

- What are the typical costs of treatment? (With and without insurance)
- How expensive are the necessary medications?
- How often does this disease require screening/ bloodwork/ scans? How expensive are these routine evaluations?

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Career Options – 5 points

Explain how this health condition will impact a person's ability to work. This can include which job options are available, as well as how some jobs may need to be modified to accommodate their health condition. Consider content discussed in class, such as the restrictions of time and access, as well as the possibility of flareups. Describe how a person's work life may be impacted by this health condition. Consider the guiding questions provided below.

- Are there career paths that are not safe options for someone who has been diagnosed with this illness?
- Would certain career options need to be modified for safety/ accessibility?
- Are there resources available to help accommodate this illness in common workplace settings?
- What other accommodations might a person with this condition need, that are *not* commonly provided?

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Social Life – 5 points

How might a person's social life be affected by this health condition? Review sources to determine the way people with this illness discuss their relationships. Be sure to address how social support can vary, and how that may create a spectrum of possible answers for this section. Consider the guiding questions provided below.

- How much would a person with this illness need to rely on a caretaker/ family member? How could that reliance level impact relations?
- Are there social events/ activities that would not be accessible to someone with this illness? Consider things like travel requirements, immune susceptibility, energy, building accessibility. How would these limitations impact relationships with friends and family?
- How might a person with this illness experience guilt/ fears of being a burden, and how will that impact the way that they interact?
- How might different demographics of patients experience varying levels of social life adjustments?
- How might a person with this condition have a different experience based on the amount of social support provided?
- How might social life impact treatment adherence?

Exemplary – 5 pts	Proficient – 4 pts	Developing – 3 pts	Needs Improvement – 2 pts or below
Integrates credible sources, provides deep analysis of how the illness impacts this life sector, and clearly connects to course concepts.	Accurately describes how the illness impacts the sector; some integration of sources or concepts, but not as consistently deep	Basic explanation of impact with minimal sources, limited details, or limited insight into lived experience.	Information is incomplete, inaccurate, or does not meaningfully address how the illness influences the life sector.

Intersectionality – 16 points (8 points per Intersection)

Students will explain the complications that arise from TWO intersections between life sectors (for example, view of self and social life; financial strain and diet). Evaluate how two life sectors intersect, to create **new**, meaningful difficulties (on top of challenges in each original sector). Consider the content we have discussed in class. There are many possible intersections but a few examples are provided below.

- How might limited job options and high financial strain create a compound effect? (E.g., job accessibility in geographical location and financial ability to relocate)
- How might a person with this disease have unique difficulties due to the overlap of social life limitations and lowered self-efficacy?
- How might physical/ accessibility limitations make it more difficult to seek out the best dietary options for a person with this condition?

Exemplary – 8 pts	Proficient – 7 pts	Developing – 6 pts	Needs Improvement – 5 pts or below
Clearly identifies intersecting life sectors and provides a highly insightful explanation of compounded challenges; integrates course concepts; analysis is empathetic and complex	Identifies intersections and explains compounded difficulties with reasonable clarity; some use of course concepts	Describes aspects of each sector but does not fully explain why the overlap creates unique challenges	Does not meaningfully analyze the intersection; explanation is incomplete or inaccurate

References – 8 points

Students will include *at least eight* sources when conducting their research. THREE of these sources need to be scholarly articles. To be considered a scholarly article, it must be published in a peer-reviewed journal. For each piece of material that a student pulls into the project, there should be an in-text citation attached to the statement, with an APA-formatted listing in the final slide(s) of the PowerPoint. Note: There will likely be substantially more than eight references, but eight is the bare minimum required for the project.

Exemplary – 8 pts	Proficient – 7 pts	Developing – 5 pts	Needs Improvement – 5 pts or below
Includes all 8 required sources; all references are correctly APA-formatted; all in-text citations are correct; sources are appropriate and high quality	One or two issues in APA formatting, citation accuracy, or source quality	Missing required sources OR multiple APA errors	Few sources provided, major formatting errors, or inappropriate sources.

The Presentation and Review

Presentation – 15 points

Students are expected to equally contribute to the presentation. The total presentation should be 10 minutes, with plus/minus 1 minute wiggle room allowed (falling outside the window can result in point deductions). Students are encouraged to practice their presentations before the final presentation, to establish timing and preferred phrasing. The presentation should be well organized and clearly communicated. A strong project will have seamless transitions between topics and speakers. Students need to balance communicating all pertinent information with being succinct and timely. By the completion of the presentation, the audience should be aware of the complexities and challenges of daily life with this health condition.

The PowerPoint for the presentation should be visually accessible, paying particular attention to color contrast and font size. A strong presentation will balance information on the slide. This can include using the 5x5 recommendations (no more than 5 lines, roughly 5 words per line) or utilizing tables to present large chunks of information. Students should be careful in the ratio between information and examples. Examples should provide backing to core information, rather than being the sole source of information.

Note: One Scheuler Cent is available to each student who asks a question at the end of a group's presentation, so be prepared for questions.

Exemplary – 15 pts	Proficient – 13 pts	Developing – 11 pts	Needs Improvement – 9 pts or below
Presentation is well-organized, accurate, engaging, and integrates course concepts; all group members present equal portions; slides are clear and professional.	Presentation is organized and accurate but elements of clarity, timing, or course integration could be improved.	Presentation lacks organization or depth; slides may be unclear; group participation uneven.	Presentation is unclear, inaccurate, or missing major required components.

Group Review – 10 points

After all presentations are complete, students will receive a worksheet to provide a review of their groupmates' contributions. Each group member is expected to be respectful and helpful throughout the project, and the review is an opportunity for group members to hold their groupmates accountable for their contribution.

Exemplary – 10 pts	Proficient – 8 pts	Developing – 6 pts	Needs Improvement – 4 pts or below
Peer evaluations indicate effortful contributions, respectful and effective communication, and reliable participation	Generally positive evaluations with minor concerns about participation or communication.	Mixed evaluations with concerns about reliability or contribution	Peer evaluations reflect limited contribution or significant conflict

Reflection – 5 points

After completing the group review, students will complete a reflection worksheet. Students will take accountability for their group contributions. Additionally, students will reflect on their learning process, integrating material discussed in class with the final project.

Exemplary – 5 pts	Proficient – 7 pts	Developing – 6 pts	Needs Improvement – 5 pts or below
Student takes accountability, recognizes areas of growth, and integrates course concepts.	Clear reflection with some connection to course content; may lack depth	Minimal personal insight; limited or missing course connections	Reflection is incomplete, off-topic, or superficial

Policies

AI Use

AI is not permitted for any resources, information, planning, or explanation aspect of the project. The only area of the project that AI can be used for is picture generation, if necessary for illustrating an aspect of the illness or treatment. If AI is used to create a picture, it **MUST** be properly cited, with an APA citation. Failure to do so will result in point deductions.

Late Policy

Students must have the PowerPoint emailed to Dr. Scheuler by Sunday, December 14th at 11:59 p.m. for screening. Failure to submit the PowerPoint for screening will result in a 5-point deduction. If students have their project completed earlier, they are welcome to send the PowerPoint early. Similarly, failure to update concerns from the screening stage will result in a 5-point deduction.

The presentation must be given during the final exam window (Wednesday, May 6th, from 1 to 3 p.m.). Failure to present will result in a zero for all group members. If a single member has helped with the project, but experiences an emergency (illness, accidents, etc.) that will impact their ability to contribute to the presentation, they must contact the instructor ASAP to establish an alternative way to present their content. If feasible, the remaining group members will present their portion. If it is not feasible (e.g., not enough time to prepare), the students will make note of what information their group mate was assigned, and present their own portions of the project.

Absent Group Member Policy

Students **MUST** contribute equally to the project. If a group member misses two of the three class group workdays, and does not establish a way to virtually contribute equal portions to the project with the group members, that group member will be removed from the group. The group will split the remaining work evenly amongst the members still in the group. The member who is removed **MUST** contact the instructor to get an alternative individual assignment. Without completion of an alternative assignment, the student will receive a zero for the final.
