# Instructions for Recording in PowerPoint

For this project, the easiest way to record your presentation is through PowerPoint. While the selection options may look slightly different for different systems/ versions, you can record with the following steps:

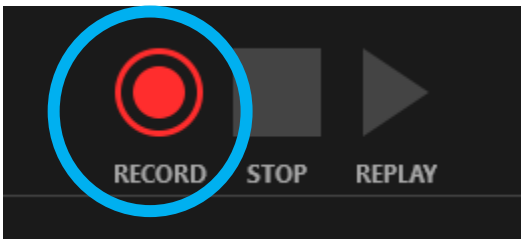

**Step 1**: Navigate to the Record tab

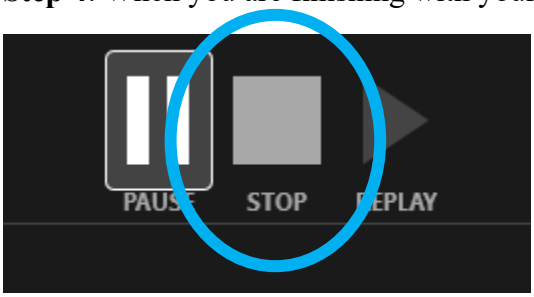

**Step 2**: Click the "Record" option (Note: your presentation is only one slide, so both "From Current Slide" and "From Beginning" will work)

**Step 3**: Somewhere on your screen will be a button for recording (typically, top left, top center, or bottom center, for all the versions I know of). When ready, press that button to record, and it will start your 3 second countdown for recording.

**Step 4**: When you are finishing with your recording, press the stop button.

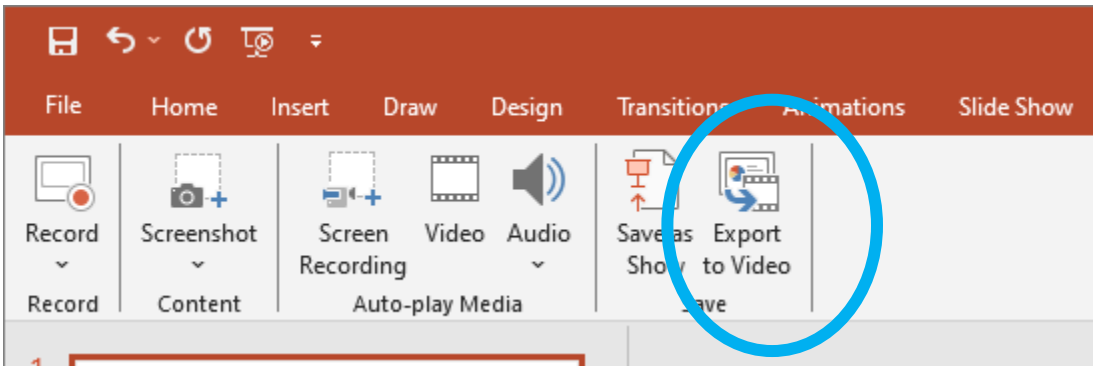

**Step 5:** After you have stopped recording, you can hit the escape key [Esc] on your keyboard to exit presentation mode.

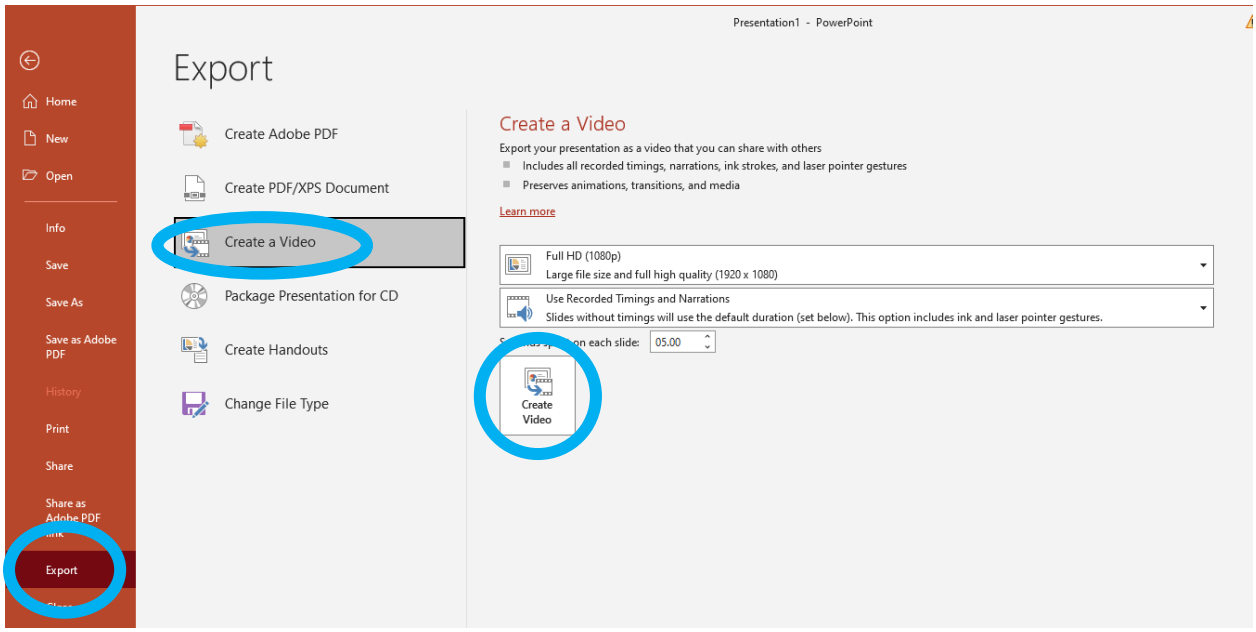

**Step 6:** When looking at the PowerPoint slide after recording, you can click on the thumbnail picture of your recording, and adjust it so it only covers the references section of your poster.

**Step 7:** Export the video. Depending on what version of PowerPoint you have, you should be able to get to this from the Record tab, which will look similar to this:

Or from the file tab, which will look similar to this:

**Step 8:** From here, you can upload your video AND the PowerPoint document to Canvas. As a note, some computers may throw a fit about the file size. The easiest solution is to create a free YouTube account, and upload your video as an unlisted video, then share the link instead. IF you run into this issue, let me know, and I can walk you through that alternative.
